Outline

- Introduction
- Image Enhancement
- Image Deconvolution
- Conclusion
- References

INTRODUCTION

- Problems when a picture is taken:
  - Noise
  - Blur
  - Out of Focus
- Solution:
  - Image Deconvolution
  - Image Enhancement

WHAT IS IMAGE ENHANCEMENT

- Process of improving the quality of original image
- Sharpens image features
- Needed when:
  - Low light image
  - Low contrast image

LOW LIGHT IMAGE

LOW CONTRAST IMAGE

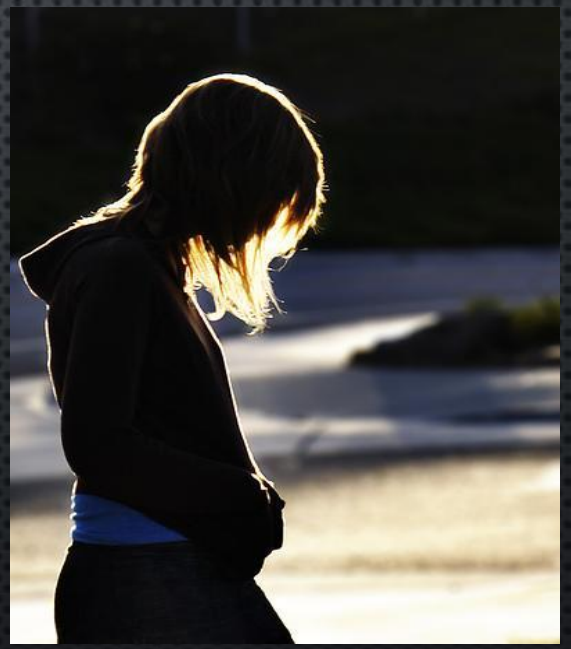

IMAGE ENHANCEMENT PROCESS

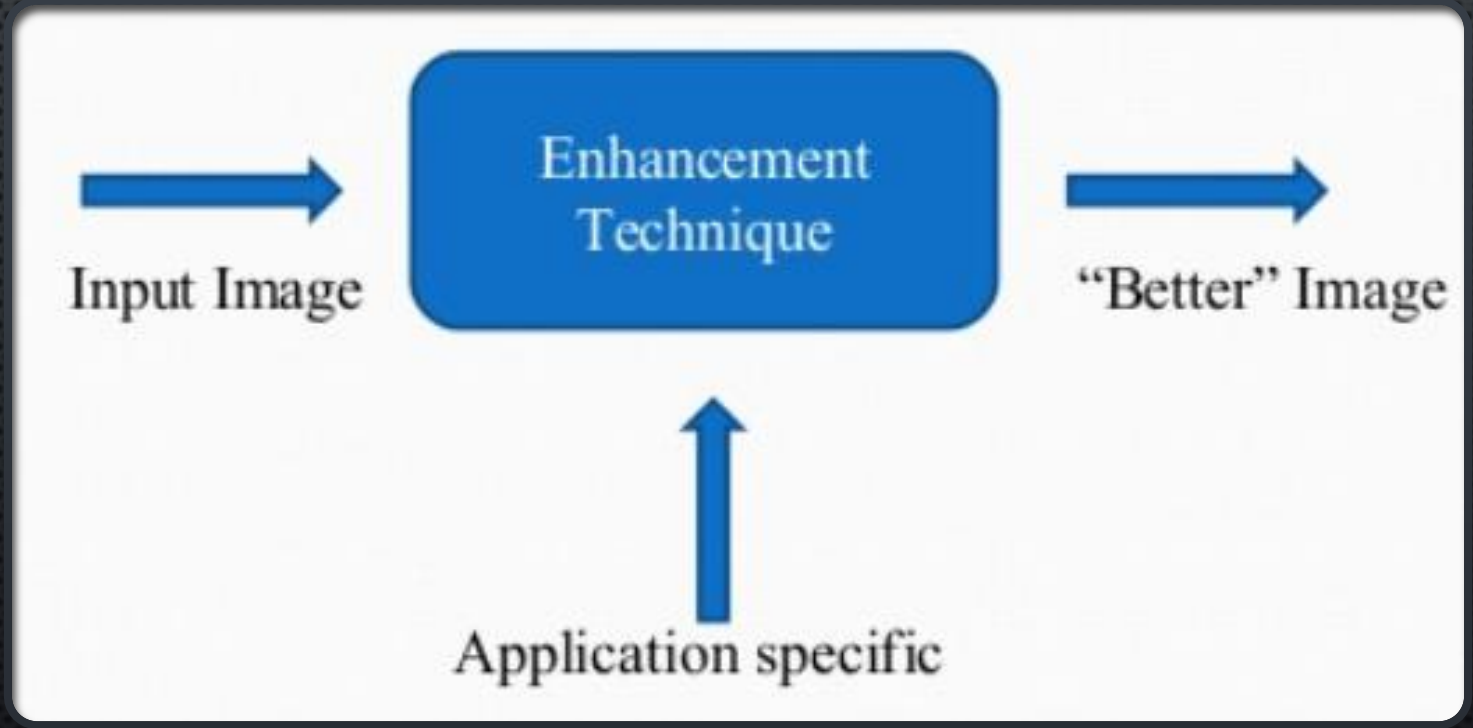


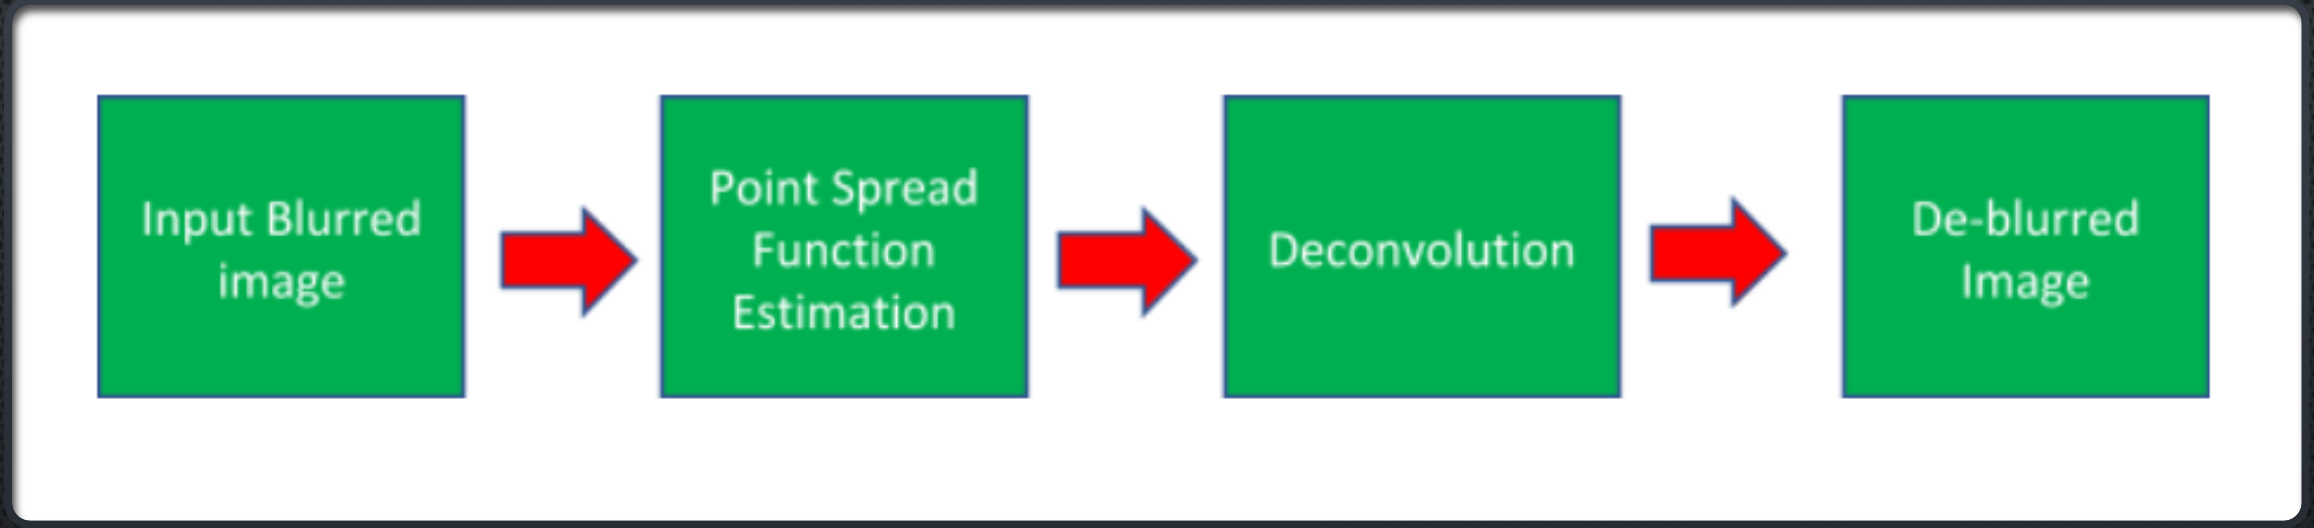
WHAT IS IMAGE DECONVOLUTION

- Process of reversing the optical distortion or degradation
- Motion deblur removes blur
- Reasons for blurry image:
  - Movement of the camera
  - Out-of-focus optical zoom
  - Short exposure time
  - Capturing image in Low light condition

MOTION BLUR

OUT OF FOCUS BLURRING

DEBLURRING PIPELINE



APPLICATIONS

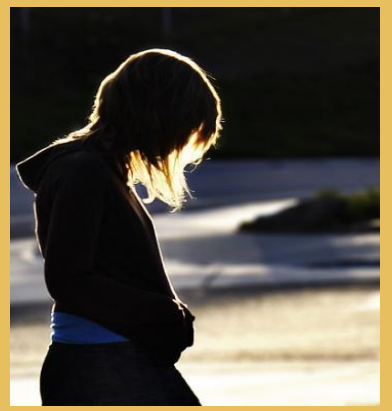
- Deep Learning Classification Pipeline
- Creation of Web Albums
- Forensic Work

RESULTS

IMAGE ENHANCEMENT

DARK TEST IMAGES

Given Images

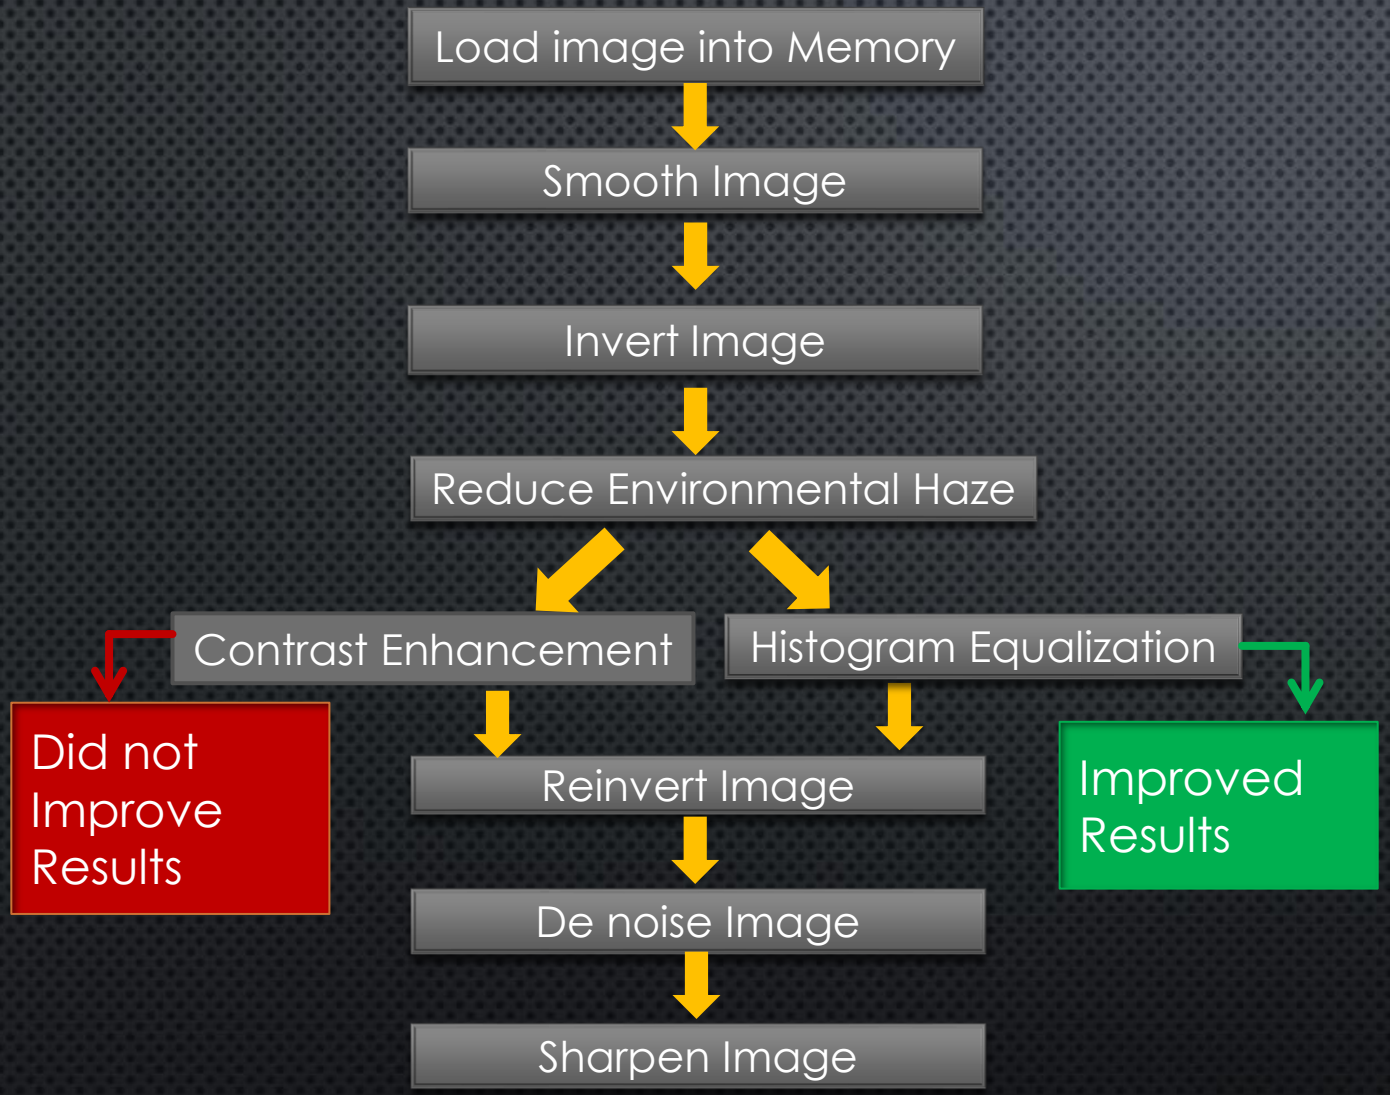


Additional Images

EVALUATED ALGORITHM

- Image Negative with Contrast Enhancement
- Image Negative with Histogram Equalization

IMAGE ENHANCEMENT ALGORITHM



Matlab Functions Used

- Imgaussfilt()
- Imcomplement()
- Imreducehaze()
- Imreducehaze('ContrastEnhancement','boost')
- histeq()
- Imguidedfilter()
- imsharpen()

ENHANCED IMAGES WITH HISTOGRAM EQUALIZATION

Original

Enhanced

Original

Enhanced

SUMMARY

- Investigated image negative with contrast enhancement and image negative with histogram equalization
- Single algorithm was developed using image negative & Histogram Equalization
- Image preprocessing using Gaussian filter worked better for some images
- Reduction of environmental haze and histogram equalization played a key role

RESULTS

IMAGE DECONVOLUTION

DE-BLURRED IMAGES

Blurred

De-Blurred

SUMMARY

- Investigated Wiener filter, Lucy Richardson and Iterative Blind deconvolution algorithms
- Single algorithm was developed using Iterative Blind deconvolution
- Number of Iterations played a key role
- Gaussian PSF performed better than Disk and Motion for initial guess PSF shape
- Image preprocessing with histogram equalization and/or histogram stretching worked better for some image only
- Image tapering function was used to minimize Ringing in the de-blurred images

STRETCH GOAL

De-Blur and Enhance Blurred and Low Contrast Image

DE-BLURRED AND ENHANCED IMAGE

Low Contrast Blurred

De-Blurred

Enhanced

Low Contrast Blurred

Enhanced

De-Blurred

CONCLUSION

- Challenging to recover an image degraded by motion blur and low contrast
- Achieved de-blurring and image enhancement using single algorithms developed
- Sequential order of application of image enhancement and then de-blurring worked well
